

Queensland Drought Management Framework 2019–2024

The Queensland Government is developing a new Drought Management Framework 2019–2024 to help increase resilience to climate risks to help producers prepare for manage and recover from drought. We will deliver this by working with all levels of government, industry and primary producers. This framework sets a clear direction for working towards a productive and profitable agriculture sector in a variable climate.

Currently: drought declarations process (1962–2020)

How we assess drought declarations

Future: drought severity index 2021 →

How we are delivering the drought management framework

Drought preparedness

- Primary Industry Productivity Enhancement Scheme
- Farm management grants
